

Jack Morgan Portfolio Website

The whole website should be highly responsive across all devices, platforms and web browsers. The website should be Gaming/Tech themed with the colour scheme matching the aesthetic, as I am a Unity Developer / Gameplay Programmer. The site should feel easy to use, navigate and explore. The website should be descriptive and yet straightforward. This will likely be viewed by employers looking to potentially hire me so it should tell them stuff about me that they want to know so always prioritise a personal and yet professional feel.

File Setup:

JavaScript: (All JS should be imported into HTML pages from JS Files)

- Search_Filter.js
- CV_Opener.js
- Projects.js (Opening Screenshots and stuff like that from the Projects page)
- Any other JS, please name by page of function

CSS: (All CSS should be imported into HTML pages from CSS files)

- Search_Filter.css
- Projects.css
- Skills_Flex_Box.css
- Certifications.css
- Global.css (For anything that is globally used across all pages)
- Any other CSS should be named by function

Navigation Bar

Global Navigation bar (HTML, CSS and JS all in one file). The Navigation bar should be imported into each page so that it can be easily edited by editing the one navbar file.

- Home
- Demos and Projects
- CV
- Education
- Additional Skills

Home Page:

- Who am I? (Education: 1 sentence on having 1st class, then an education button for see certificates) Why do you want to work in it Gameplay Programming /

Unity Development? (Opsters eSports CEO), What is my vision for game development?

- Clear link to my CV for employers to easily open and view.
- Past projects (and key skills) – showcase includes Game Trailers for my projects (videos).
 - Cosmic Sabbath – Unity, C#, department management, teamwork
 - Hazard Perception – VR, project planning,
 - Mechanical Revelation – game design and ai programming
- Highlighted technical skills in a flex box (Unity, C#, PC, Console, VR, AR, Meta Quest 2 & 3, UI Programming, Gameplay Mechanics, AI Programming, Pathfinding Algorithms, Visual Studio)
- Little Disclaimer that this Portfolio Website was built from scratch by me using just JavaScript, HTML and CSS in an IDE. Used tools online such as Google, How-Tos and more to help support development and debug issues. (I think this part will be good to show off my programming skills.)

Demos and Projects Page

Should be able to filter Projects based on:

Project Type:

- University Module
- Solo Projects
- Collaborative Projects
- Game Development
- Web Development

Programming Languages:

- C#
- HTML
- JavaScript
- CSS
- C
- C++
- Python

Platform:

- PC
- VR
- Console
- Mobile

Mechanics implemented:

- AI Programming
- Pathfinding
- More to be added, so make it easy to add to this filter

Projects:

All Projects should feature the following:

- Title
- Description
- Platform
- Screenshots
- Trailer
- Release Date
- Programming Language
- Development Software (Unity/WebStorm IDE, etc.)
- Key Features (Mechanics, Gameplay Features, Key Assets, Level Designs and cool stuff)
- Project Type (Uni Project, Solo Project, etc.)

Include these Projects:

- Hazard Perception
- Mechanical Revelation
- BlockSumVR
- Survery4All
- Opsters eSports Website
- Game Completion Website

Additional Skills

On this page, I want to talk about other skills that I have which I did not go into on other pages very much, as they are not as important as previously mentioned skills.

Skills I want to mention are:

1. Graphic Design (Photoshop) Add a link to my Graphic Showcase webpage for Opsters eSports, showcase some other personal graphics too for YouTube and mention Photo Editing skills that I learnt doing Photography at A-Levels, featuring some of my coolest work and viewable PDFs
2. Video Editing (Filmora Video Editor)

3. Asset Creation (Blender, slightly touched on for Dissertation by creating Traffic Lights, can include a gif)
4. YouTube Channel (Asset Creation, Planning, Channel Trailer, videos and stuff like that)
5. Tech Skills, great with setting up and fixing technology, such as putting together a sound system using new and old technology, all the same, building and upgrading a computer using a motherboard, CPU and ram as well as a great understanding of wires and technology such as knowing the differences between different types of ethernet, HDMI and USB Cables from generation to generation. Very interested in this kind of stuff (tech geek)

CV Page

- Full Page view of CV (PDF)
- Global Site Navigation Bar attached to the page that does not overlap the PDF

Education Page:

Certificates and details

Footer

- LinkedIn link
- GitHub link
- YouTube Channel link
- Contact Email
- Simple T&C disclaimer so that the website is in agreement with any laws or anything in the UK
- Domain Address explanation simple yet quick (Domain: OpsterseSports.co.uk, attached to this because I own the rights to the domain, so it is easier for me to use that)
- Professional and yet fancy design
